

Standardizing neuroimaging: BIDS, aa, NIDM

Tibor Auer, Research Fellow in MRI
Department of Psychology, Royal Holloway University of London

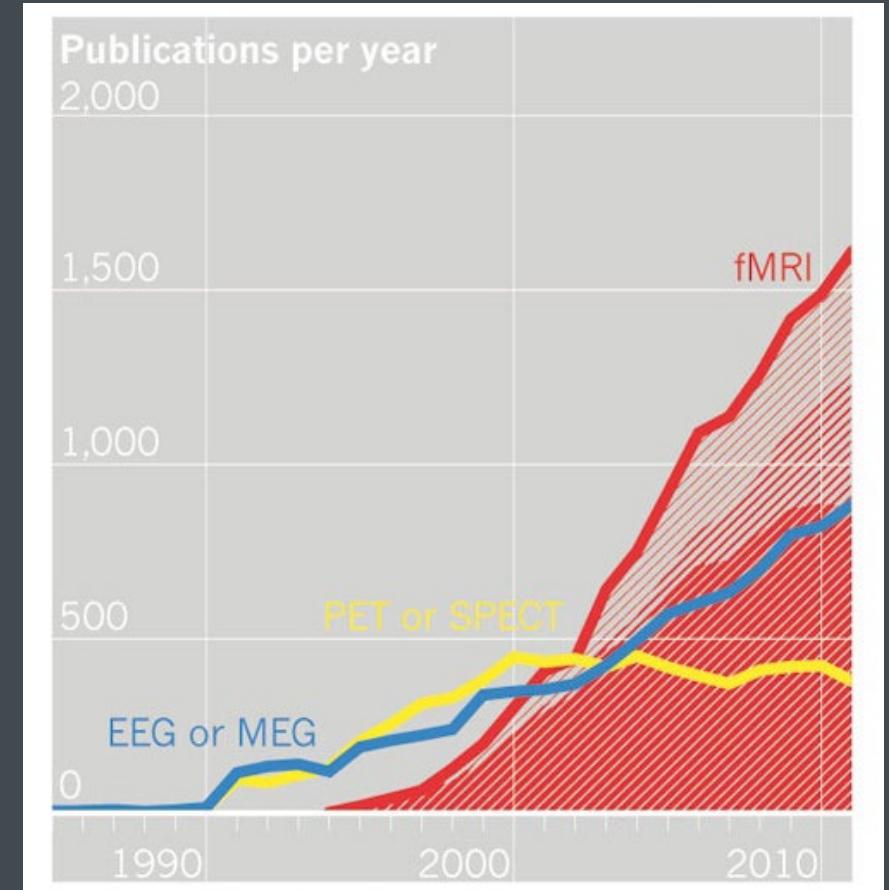

ROYAL
HOLLOWAY
UNIVERSITY
OF LONDON

Challenge

ROYAL
HOLLOWAY
UNIVERSITY
OF LONDON

- Number of projects is increasing¹
- Cohort sizes are increasing
 - 2008: ~10
 - 2018: hundreds
- Complexity is increasing:
 - Multimodality → integrative view of the brain
 - ↓
 - Requires integration in our practices

<http://www.nature.com/news/brain-imaging-fmri-2-0-1.10365>

Challenge

ROYAL
HOLLOWAY
UNIVERSITY
OF LONDON

- **Integration**
 - Experiment: stimulus presentation, response recording, logging
 - Data: scripts, multimodal images, behavioural data, log files
 - Analysis: different approaches, software, architecture
 - Report: transparency, putting into context¹, providing evidence for validity²
- **Issues**
 - Demanding
 - Difficult to set up and document → Reproducibility and replicability
 - Easier to make errors
 - Harder to detect errors

Solution

ROYAL
HOLLOWAY
UNIVERSITY
OF LONDON

- **Global scale:**
 - Harmonizing protocols
 - „Best practices”
 - Long-term planning
- **Local scale**
 - Implementing global solution
 - Building blocks
 - Support

Data

ROYAL
HOLLOWAY
UNIVERSITY
OF LONDON

Data

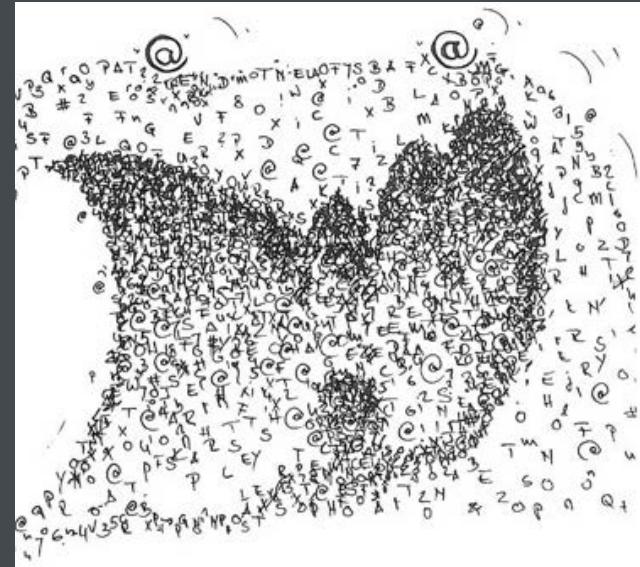

ROYAL
HOLLOWAY
UNIVERSITY
OF LONDON

- **Challenge: How to handle our data?**

- Sharing (even within the same lab) →
 - Rearranging data

- Processing →
 - Rearranging data
 - Rewriting scripts
 - Entering tedious manual inputs¹

- Validating →
 - Inaccuracy
 - Incompleteness

<http://sonian.com/shut-down-the-email-monster-with-hosted-email-archiving>

- **BIDS: Brain Imaging Data Structure – <http://bids.neuroimaging.io>**

- Standard for organizing data of a human neuroimaging experiment.
 - Developed by a community (<https://github.com/bids-standard>):
 - Supported and recommended by the INCF

- **Solution for**

- PIs: More than one person work on the same data over time
 - Users: Software aware of the data structure → less manual entry
 - Databases: Easier to share/exchange data
 - Already accept BIDS: [OpenNEURO](#), COINS, LORIS , SciTran, XNAT
 - Most funders and some journals require data sharing
 - Validator tool

- Principles
 - Some metadata is better than no metadata
 - Don't rely on external software or complicated file formats
 - Aim to intuitively capture most of experiments, but give space to extend the standard

Data

BIDS

HOLLOWAY
UNIVERSITY
OF LONDON

```
dicomdir/
  1208200617178_22/
    1208200617178_22_8973.dcm
    1208200617178_22_8943.dcm
    1208200617178_22_2973.dcm
    1208200617178_22_8923.dcm
    1208200617178_22_4473.dcm
    1208200617178_22_8783.dcm
    1208200617178_22_7328.dcm
    1208200617178_22_9264.dcm
    1208200617178_22_9967.dcm
    1208200617178_22_3894.dcm
    1208200617178_22_3899.dcm
  1208200617178_23/
  1208200617178_24/
  1208200617178_25/
```

```
my_dataset/
  participants.tsv
  sub-01/
    anat/
      sub-01_T1w.nii.gz
    func/
      sub-01_task-rest_bold.nii.gz
      sub-01_task-rest_bold.json
    dwi/
      sub-01_dwi.nii.gz
      sub-01_dwi.json
      sub-01_dwi.bval
      sub-01_dwi.bvec
  sub-02/
  sub-03/
  sub-04/
```

- Some metadata is better than no metadata
 - Folder structure
 - Filename

- Some metadata is better than no metadata
 - JSON files¹ for key–value pairs

```
{  
  
    "RepetitionTime": 3.0,  
  
    "EchoTime": 0.03,  
  
    "FlipAngle": 78,  
  
    "SliceTiming": [0.0, 0.2, 0.4, 0.6, 0.8, 1.0, 1.2, 1.4,  
                   1.6, 1.8, 2.0, 2.2, 2.4, 2.6, 2.8],  
  
    "InPlanePhaseEncodingDirection": "AP"  
  
    "TaskName": "nback"  
  
}
```

- **Don't rely on external software or complicated file formats**

- JSON files for key–value pairs
- Use of compressed NIFTI files for imaging data. A small blue cube icon with a white brain slice and coordinate axes.
- Use of tab separated files for tabular data (demographics, events). A small green document icon with the letters 'CSV' in green.

```
participant_id age sex
sub-001         34   M
Sub-002         12   F
Sub-003         33   F
```

```
onset duration trial_type ResponseTime
1.2    0.6      go        1.435
5.6    0.6      stop      1.739
...
...
```

- Use of legacy text file formats for b vectors/values

- **Aim to intuitively capture most of experiments...**
 - Supports most types of data, which are common in the field
 - Make certain folder hierarchy levels optional for simplicity.
 - Supports behavioural variables on any level (subjects, sessions and runs).
 - Supports contiguous acquisition covariates (breathing, cardiac etc.)
- **...but give space to extend the standard**
 - Allows for arbitrary files not covered by the spec to be included.
 - BIDS Extension Proposals

Analysis

ROYAL
HOLLOWAY
UNIVERSITY
OF LONDON

Challenge

ROYAL
HOLLOWAY
UNIVERSITY
OF LONDON

- Increasingly large cohort sizes
 - 2004: <10
 - 2014: hundreds
 - Multimodality: fMRI, DWI, anatomy(T1, T2), MTI
 - Offers a more integrated view of the brain
 - Requires integration of different methods
- ↓
- Issues:
 - Difficult integration of methods
 - Difficult documentation → Reproducibility
 - Increased risk of human error
 - Harder to detect errors
- }
- Transparency

Solution – Automatic analysis (aa)

ROYAL
HOLLOWAY
UNIVERSITY
OF LONDON

- **Description**

- A pipeline system for neuroimaging written in Matlab
 - MRI: structural, fMRI, DTI/DKI, MTI
 - MEG/EEG
 - Supports SPM **12¹** and some functions from FSL and Freesurfer, several toolboxes, etc.
 - Proprietary code from contributors and external scientists
-
- <http://automaticanalysis.org>
 - <https://github.com/automaticanalysis/automaticanalysis/blob/master/README.md>

- **Availability**

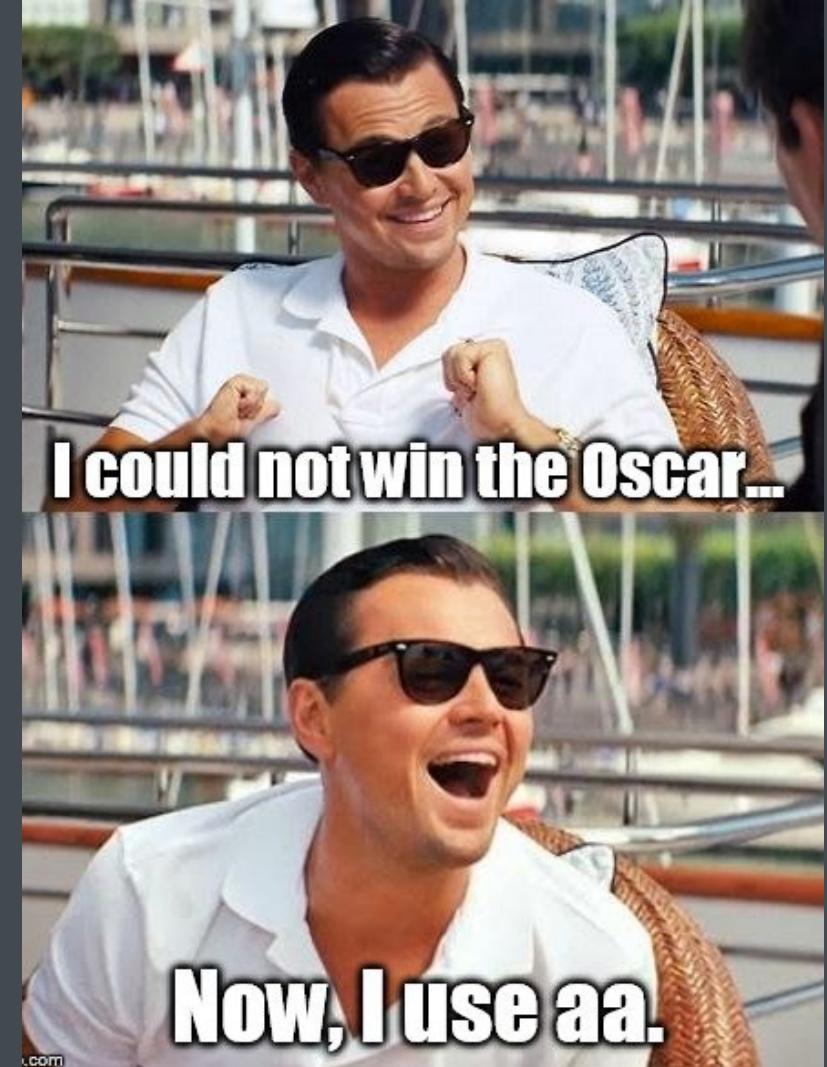

- [GitHub](#)

Solution – Automatic analysis (aa)

ROYAL
HOLLOWAY
UNIVERSITY
OF LONDON

- Properties
 - High-level based on standardised recipes
 - Automatic, transparent, replicable
 - Capture provenance
 - Code recycling/sharing/publishing
 - Tracks processes → Restartable
 - Notifies via e-mail
 - Record keeping → Diagnostics¹
 - NiFTI-4D support → “Economic”

automatic analysis (aa)

Efficient workflows for medical imaging

Automatic analysis (aa): efficient neuroimaging workflows and parallel processing using Matlab and XML

Rhodri Cusack^{1*}, Alejandro Vicente-Grabovetsky², Daniel J. Mitchell³, Conor J. Wild¹, Tibor Auer³, Annika C. Linke¹ and Jonathan E. Peelle⁴

¹Brain and Mind Institute, Western University, London, ON, Canada

²Donders Institute for Brain, Cognition and Behaviour, Nijmegen, Netherlands

³MRC Cognition and Brain Sciences Unit, Cambridge, UK

⁴Department of Otolaryngology, Washington University in St. Louis, St. Louis, MO, USA

The screenshot shows the 'Home' page of the automatic analysis (aa) website. The top navigation bar includes links for Home, News, Getting started, Resources, Advanced, and About Us. The main content area features a brain scan image and a mathematical formula:
$$\frac{2E[\varepsilon^2]}{Var[\varepsilon^2]}$$
. Below this is a section titled 'Home' with the following text:
Automatic analysis (aa) is a framework for medical image analysis designed to allow users to achieve an efficient analysis workflow, whether analyzing a single dataset or creating a complex pipeline with many thousands of acquisitions.
aa uses Matlab, and brings together many of the best tools for fMRI analysis (e.g., from SPM5/8/12, FSL and Freesurfer), and MEG/EEG (EEGLab).

Please visit [The aa website](#) for more information!
Here you can find example [tasklists](#) and [scripts](#).
Ready.

- High-level scripting (examples also bundled)
 - **Tasklist**: pipelines describing a series of modules to be executed
 - Easy reading
 - Easy reordering
 - Branching
 - **User Master Script**: specifies the analysis⁰
 - Loads in: default parameters and the tasklist
 - Customises: parameters and tasks
 - Specifies¹: data and model
 - Generates³: report
 - Cleans up⁴: garbage (from data encapsulation)

Automatic analysis (aa)

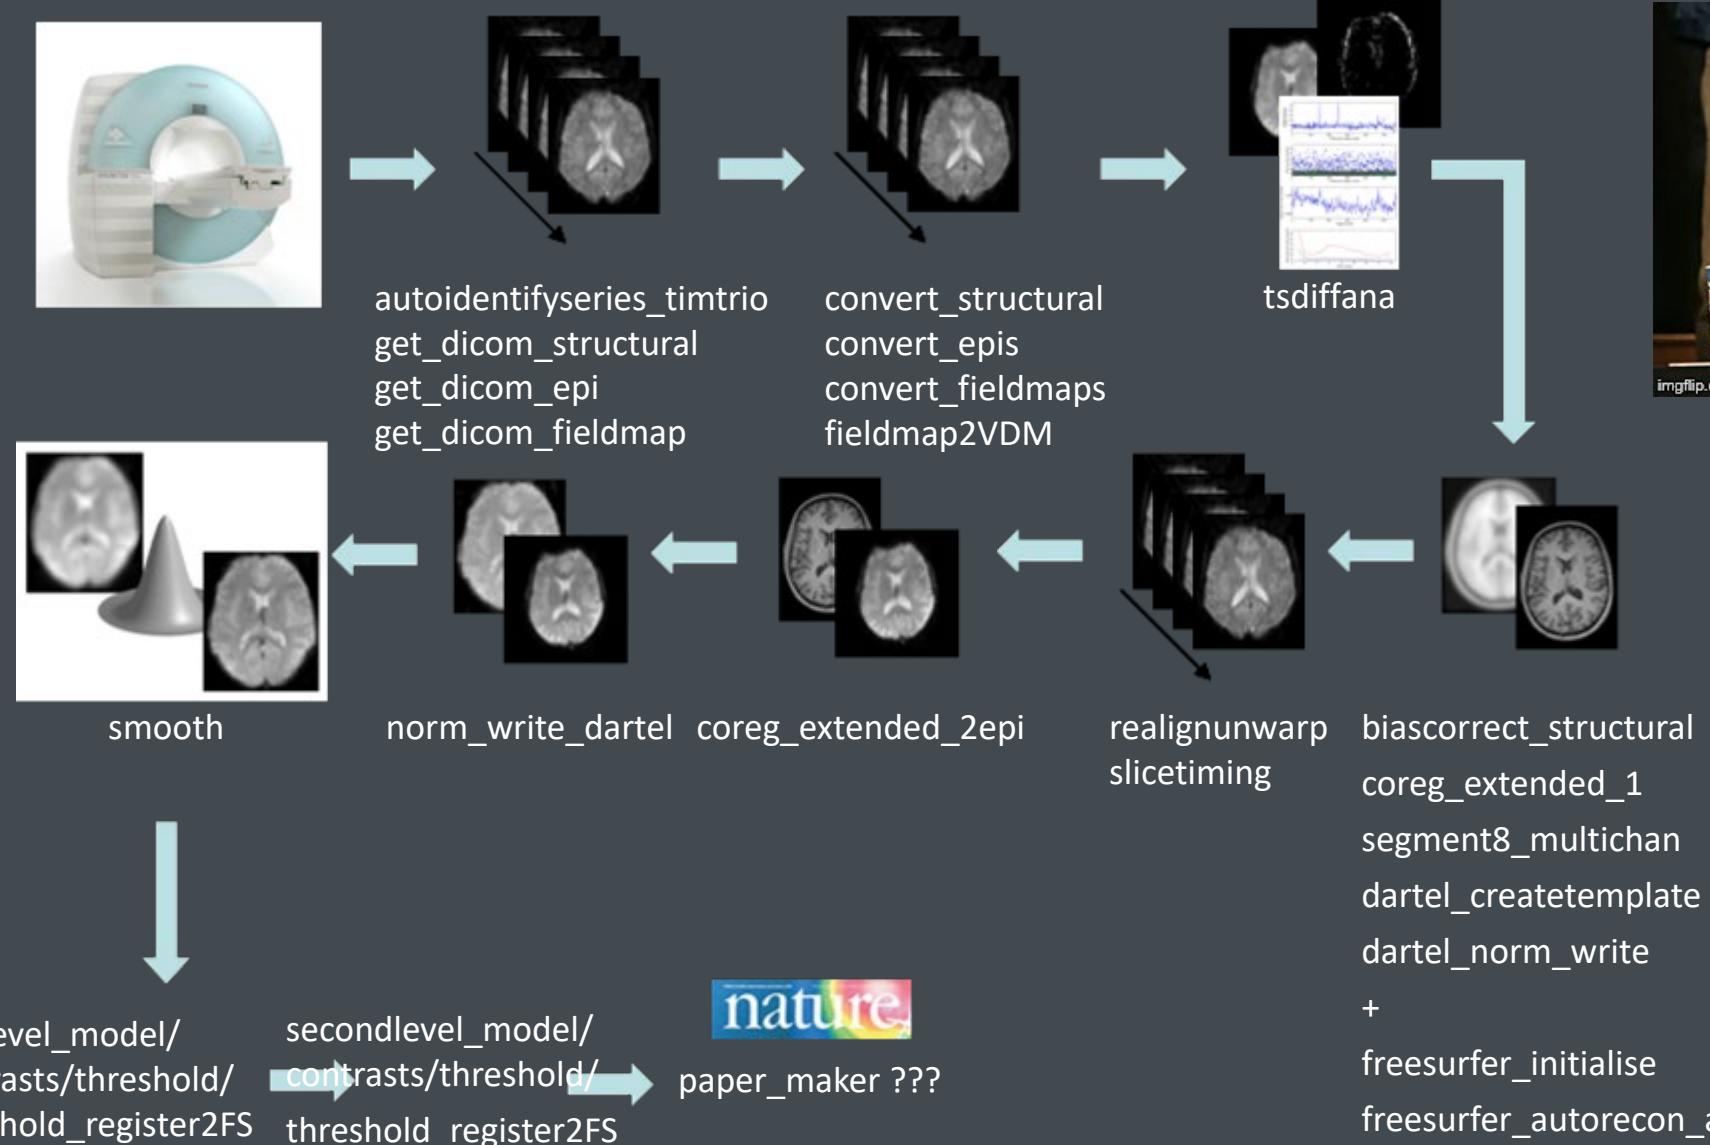

Automatic analysis (aa)

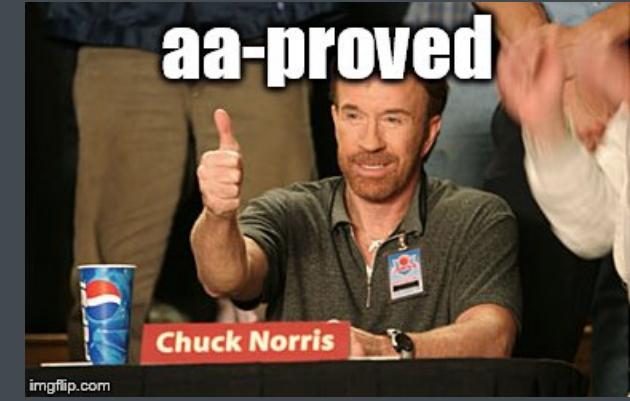

ROYAL
HOLLOWAY
UNIVERSITY
OF LONDON

aa-natomy

aa-proved

imgflip.com

- Modules

- Header¹ – Data encapsulation
 - Defines inputs and outputs (streams)
 - Defines domain (i.e. once per study/subject/session/scan)
 - Set parameter defaults²
 - Ensures independence → Parallel processing on cluster or cloud³
- Body⁴ – Code encapsulation
 - Low overhead, Expandable

Automatic analysis (aa)

aa-natomy

ROYAL
HOLLOWAY
UNIVERSITY
OF LONDON

- **Data streams¹**

- Modules explicitly define their inputs and outputs and default parameters.

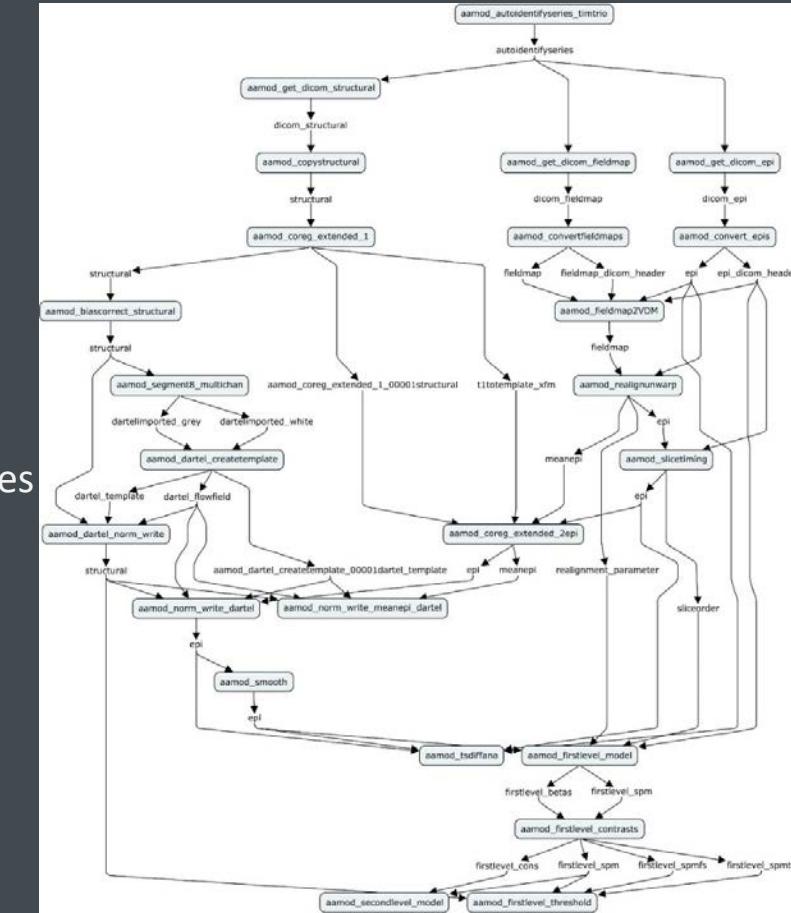

e.g. (fragment from [aamod_realignunwarp.xml](#))

```
<inputstreams>
  <stream>epi</stream>
  <stream>fieldmap</stream>
</inputstreams>
<outputstreams>
  <stream>realignment_parameter</stream>
  <stream>epi</stream>
  <stream>meanepi</stream>
</outputstreams>
```

→ Takes:
→ a set of EPI volumes
→ and a fieldmap;

→ Produces:
→ realignment parameters,
→ another set of EPI volumes
→ and a mean EPI volume

- Easy reordering of the modules without worrying for prefixes
 - Provenance (flow of data) → parallel computing, report generating

Automatic analysis (aa)

QA

ROYAL
HOLLOWAY
UNIVERSITY
OF LONDON

- **Diagnostics**

- Between-subject summaries with descriptive stats to identify outliers

- Motion correction

- Registration (Normalisation)

- First-level activations

- Within-subject summary to localize the erroneous stage

- “Large Study” features:
 - NiFTI-4D format also for SPM-based modules (data maintenance)
 - Site-/user-/study-specific configuration defaults
 - Multiple raw data (DICOM) sources
 - Pipeline connection: direct aa streams from a common pipeline
 - Can select only a subset of subjects and sessions
 - Keeps dependency: pipeline aware of source changes
 - E.g.:
 - Multimodal study: separate pipelines for each modality
 - Complex study: common preprocessing pipeline + multiple models

Automatic analysis (aa)

BIDS-aware

ROYAL
HOLLOWAY
UNIVERSITY
OF LONDON

- Brain Imaging Data Structure (BIDS) as input:

% Add data

```
aap.directory_conventions.rawdatadir = '<path to BIDS dataset>';  
aap = aas_processBIDS(aap);
```

↓

- For: structural (t1w, t2w), functional, fieldmap, diffusion
- Adds: sessions (within-subject or separate), subjects, events (all, not BIDS-Model)

- Cave:

- Tasklist must be set accordingly

Automatic analysis (aa)

BIDS-aware

ROYAL
HOLLOWAY
UNIVERSITY
OF LONDON

- **BIDS-App:** <https://github.com/BIDS-Apps/aa> and <https://hub.docker.com/r/bids/aa>
- Includes: MATLAB run-time, FSL, FreeSurfer

- **Usage:**

- *run <bids_dir> <output_dir> {participant/group}
[--participant_label <participant_label>]*

- [--freesurfer_license <license_file>]
[--connection <pipeline to connect to>]
[<tasklist> <user_customisation>]*

- **Arguments**

- BIDS-specific
 - aa-specific
 - Connection to a previously processed pipeline
 - [Tasklist](#)
 - [User customisation](#)

- **BIDS-App:** <https://github.com/BIDS-Apps/aa> and <https://hub.docker.com/r/bids/aa>
- Includes: MATLAB run-time, FSL, FreeSurfer
- E.g.:
 - *docker pull bids/aa*
 - *docker run -ti --rm --read-only -v /tmp:/tmp -v /var/tmp:/var/tmp \\ -v \${HOME}/Download:/download -v {HOME}/Download/ds114_test1:/bids_dataset -v {HOME}/Download/aa:/outputs \\ bids/aa \\ /bids_dataset/outputs participant --participant_label 01 \\ --freesurfer_license /download/license.txt \\ /download/BIDS114_tasklist.xml /download/BIDS114_test1_aa.xml*
